| The eGFR is calculated using the 2021 CKD-EPI Cr equation, which includes serum Cr, age, and sex but does not include a race coefficient. The National Kidney Foundation recommends this formula for calculation eGFR in adults. GFR will not calculate if sex is unknown or patient age is <18 years. |        |  |                                 |                 |      |
