

## **Radiology Report**

Facility: Phoenix Imaging Center

Patient: Lisa Wilson

DOB: 06/14/1982

Exam Date: 09/30/2025

Referring Physician: Dr. Andrew Thompson, MD

Exam Type: MRI Right Knee (Without Contrast)

Clinical Indication: Post-operative evaluation following ACL reconstruction

### **Findings:**

ACL graft visualized in anatomic position; intact and well-aligned.

No evidence of graft tear, tunnel widening, or hardware complication.

Mild joint effusion consistent with expected post-operative changes.

Articular cartilage preserved without focal defect.

Menisci intact; no evidence of tear.

No bone marrow edema or contusion.

Patellofemoral alignment normal.

### **Impression:**

Satisfactory post-operative appearance of the ACL graft with mild effusion.

No complications or re-tear identified.

Interpreting Radiologist:

Dr. Natalie Chen, MD – Diagnostic Radiology
