

Patient presents with

Abdominal Pain

Patient reported she has had abdominal pain since 4-22-25.

38-year-old female presents to the emerged part with complaints of abdominal pain and back pain which she states has been present for the past 2 days.

Patient describes left-sided pain which is consistent with her previous exacerbations of diverticulitis. She denies any associated fever. States she had 1 episode of vomiting yesterday. She states that today she noticed some blood in her stool. She elected to come to the emergency department secondary to this as well as her worsening pain. Was hospitalized earlier this month for similar. No aggravating or alleviating factors.

1636 Patient seen by myself in room 9. Competence of laboratory and radiographic workup initiated. Patient given IV meds for pain and nausea. Workup reviewed. Shows evidence of acute diverticulitis. IV antibiotics given. Patient reports continued pain and nausea. Additional medications ordered. She requested admission which appears to be reasonable given her recurrent symptoms despite recent hospitalization as well as her associated rectal bleeding. Montgomery Center consulted. [JT]
